DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tsukagoshi et al (US 4,740,657).

Tsukagoshi discloses conductors 5 on a substrate 7 and conductors 6 on a substrate 7, electrically connecting the conductors with an adhesive layer 4. Tsukagoshi discloses that the thickness of the adhesive film can be determined based on the particle size of electroconductive particles and properties of the connecting material and further discloses that the preferable thickness is between 3 to 100 μm .

Tsukagoshi fails to disclose the claimed relationship between the thickness of the adhesive layer with respect to the height, width and spacing between the electrodes.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the structure of Tsukagoshi satisfying the claimed relationship between the thickness of the adhesive layer with respect to the height, width and spacing between the electrodes, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Response to Arguments

Art Unit: 3729

1. Applicant's arguments filed 10/23/03 have been fully considered but they are not persuasive.

Tsukagoshi clearly disclosed that there is clear relationship between the conductor space and the size of the electroconductive particle to prevent leak (col. 7) and the thickness of the particles have direct relationship with the thickness of the adhesive (col. 10) for the purpose of producing a structure having low resistance temperature coefficient at the conductor connecting portions.

Interviews After Final

2. Applicant note that an interview after a final rejection must be submitted briefly in writing the intended purpose and content of the interview (the agenda of the interview must be in writing). Upon review of the agenda, the Examiner may grant the interview if the examiner is convinced that disposal or clarification for appeal may be accomplished with only nominal further consideration. Interviews merely to restate arguments of record or to discuss new limitations will be denied. See MPEP 714.13 and 713.09.

Conclusion

3. Please provide reference numerals (either in parentheses next to the claimed limitation or in a table format with one column listing the claimed limitation and another column listing corresponding reference numerals in the remark section of the response to the Office Action) to all the claimed limitations as well as support in the disclosure for better clarity. Applicants are duly reminded that a full and proper response to this Office Action that includes any amendment to the claims and specification of the application as

Art Unit: 3729

originally filed requires that the applicant point out the support for any amendment made to the disclosure, including the claims. See 37 CFR 1.111 and MPEP 2163.06.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
